

Metalurgica company website

1 - Introduction

- The idea of this site is to make a presentation of the company where they can clearly see the potential of this company, facilitate the search for information about products that work and contacts.

There will also be a news session about the company, the news will be added by the company's employees.

- With this website the company will achieve greater visibility, will be able to keep updated news daily for its customers, for example: Machinery acquisitions, new production methods, display an ISO certificate and etc ...

2 – Expected List of Features

- Responsive content with easy access and good reading on any device
- Display of news that can be added in real time
- Contact forms, Maps and phones

Nowadays we have all sizes of screens, so the website should be designed to have a good display on any screen size, in addition to being a presentation site for a company that has a news resource that always keeps customers interested in knowing how the company is doing and how good it can be to close a partnership and finally forms and maps facilitate customers to find the best way to contact or visit the company.

3 – Market Survey

- Several industry sites use this type of idea: Vetore.com, BrandIdobrasil.com.br, dtrvms.it, magna.com and baomarc-automotive.com
